

Krishiv Khatri

30332 Atlanta, GA | +1 (470) 313-5969 | krishivkhatri@gatech.edu | linkedin.com/in/krishiv-khatri

Education

Georgia Institute of Technology | Atlanta, GA

Expected Graduation: May 2027

Bachelor of Science in Computer Science; GPA: 4.00, Faculty Honors & Dean's List

Concentration: Artificial Intelligence, Information Internetworks

Coursework: Data Structures and Algorithms, Object Oriented Programming, Discrete Math For CS, Linear Algebra

Involvements: Startup Exchange, GT Venture Capital, Trading @ GT

Skills

Programming: Python, Java, JavaScript/TypeScript, Node.js, React, Next.js, MATLAB, NumPy, Pandas, PyTorch, REST APIs, Git.

Software: Supabase, Amazon Web Services, Azure, Google Cloud Platform, Figma, Adobe Creative Suite, Arduino, Microsoft Office, Autodesk Fusion360, BTEC Digital Design Certificate, etc.

Languages: Chinese (intermediate), Hindi (native), English (native), Spanish (beginner)

Experience

Global Futures and Options Exchange (GFO-X)

May 2025–July 2025

Software Developer, AI

- Built a RAG engine (vLLM, LangChain, PyTorch) for a Jira/Confluence agents; scored >90% across RAGAS metrics.
- Developed a Confluence scraper + classifier, populating 1,000+ docs into PostgreSQL for fast semantic search.
- Designed a ReAct multi-agent system with gap analysis, automated ticketing, progress tracking, and sentiment checks.
- Cut QA time 70% via pytest and automated testing; collaborated with dev + business and shipped production ready PoC in <2 months, enabling 5+ business units to pilot AI workflows across infra, development, market ops, quant and compliance.

SlideIn – AI-Powered Cold Outreach Platform

April 2025–Present

Founder & Full Stack Engineer

- Building the first B2C cold outreach tool with hyper-personalized context-aware emails, automated sending, reply tracking, and real-time analytics; powered by Gemini, Gmail/Outlook APIs, and custom web scraping. www.slidein.now
- Won 1st place at the Georgia Tech Shipathon sponsored by Microsoft and NVIDIA; awarded \$5k+ in Azure credits.
- Launched to 1,000+ users, and growing, in weeks and reached 500K+ LinkedIn impressions; actively expanding team.
- Led product, growth, engineering, shipping a viral UI and full-stack engine to redefine how people connect online.

FundFluent Limited

Summer 2022, Summer 2023

Product Development Intern

- Built an automated SEO content generation pipeline; 50+ blogs and boosting organic traffic by 120% in 3 months.
- Analyzed 50K+ user events with Pandas/SQL to uncover engagement bottlenecks, directly informing product changes in Funding v2 used by 1,000+ SMEs.
- Led 3+ self-initiated projects, collaborating directly with the CEO and CTO at a fast paced FinTech startup.
- Won *Most Outstanding Student* from HKU Business Academy (cohort of 200+ students), following product strategic pitch.

Projects

Heston Model Options Pricing Engine

August – December 2024

Python, Stochastic Processes, Monte Carlo Simulation, Financial Modeling

- Built an options pricing engine based on the Heston model, where volatility follows a mean-reverting CIR process to capture smile and skew.
- Implemented Monte Carlo simulations with Euler-Maruyama discretization and antithetic variates for efficient option pricing.
- Modeled arbitrage-free volatility surfaces and optimized performance with NumPy based vectorized computation.

Autonomous Delivery Robot

August – December 2024

Python, Robotics Software, Path Planning, Sensor Integration

- Programmed an autonomous robot in Python capable of navigating maze like environments using A* and Dijkstra's path-planning algorithms.
- Implemented real time obstacle avoidance and a room-sweeping automation mode using feedback from ultrasonic and IR sensors.
