

Krishiv Khatri

Atlanta, GA | +1 (470) 313-5969 | krishivkhatri@gatech.edu | krishivkhatri.com | linkedin.com/in/krishiv-khatri

Education

Georgia Institute of Technology | Atlanta, GA

Expected Graduation: May 2027

Bachelor of Science in Computer Science; GPA: 4.00, Faculty Honors & Dean's List

Concentration: Artificial Intelligence, Information Internetworks

Involvements: Startup Exchange, GT Venture Capital, Trading @ GT

Skills

Programming: Python, Java, TypeScript, Node.js, React, Next.js, FastAPI, NumPy, Pandas, Langchain, PyTorch, REST APIs.

Cloud + Tools: Supabase, AWS, Azure, Google Cloud Platform, Docker, Git, PostgreSQL, MongoDB, CI/CD, Figma.

Experience

Global Futures and Options Exchange (GFO-X)

May 2025–July 2025

Software Developer, AI

- Built a RAG engine (vLLM, LangChain, PyTorch) for a Jira/Confluence agents; scored >90% across RAGAS accuracy, reducing ticket resolution time by 40%, saving an estimated \$500K+ annually in operational costs.
- Developed a Confluence scraper + classifier, indexing 1,000+ internal docs into PostgreSQL, cutting knowledge retrieval from hours to seconds and boosting employee productivity by 15–20% across 200+ staff.
- Designed a ReAct multi-agent system with gap analysis, automated ticketing, progress tracking, and sentiment checks, improving sprint planning efficiency by 30%, equivalent to 200+ engineering hours saved per quarter.
- Automated QA pipelines with pytest, reducing QA cycle time by 70% (~80 engineer hours/month); delivered production-ready PoC in 2 months, powering AI workflows for 5+ business units including infra, market ops, and compliance.

SlideIn – AI Cold Outreach Platform

April 2025–Present

Founder & Full Stack Engineer

- Launched the first B2C cold outreach tool, generating 1,000+ users in 3 weeks, 500K+ LinkedIn impressions, and \$5K+ in Azure credits. Won 1st place at the Georgia Tech Shipathon hackathon sponsored by Microsoft and NVIDIA.
- Built full-stack platform (React, Node.js, Gemini, Gmail/Outlook APIs, web scraping) delivering 3–5x higher email replies compared to standard outreach tools, unlocking new monetization potential in a \$15B+ email marketing industry.
- Scaled outreach engine to handle 10K+ automated emails/day with real-time analytics, positioning SlideIn for SaaS subscription revenue at \$10–20K MRR within 6 months. www.slidein.now.

FundFluent Limited

Summer 2022, Summer 2023

Product Development Intern

- Built an automated SEO content pipeline publishing 50+ blogs, increasing organic traffic by 120% in 3 months and generating an estimated \$100K+ in free inbound marketing value.
- Analyzed 50K+ user events with Pandas/SQL to uncover engagement bottlenecks, directly informing product changes in Funding v2 used by 1,000+ SMEs.
- Led 3+ self-initiated projects, collaborating directly with the CEO and CTO at a fast-paced FinTech startup.
- Won *Most Outstanding Student* from HKU Business Academy (cohort of 200+ students), following product strategic pitch.

Projects

Heston Model Options Pricing Engine

August – December 2024

Python, Stochastic Processes, Monte Carlo Simulation, Financial Modeling

- Built an options pricing engine based on the Heston model, where volatility follows a mean-reverting CIR process to capture smile and skew.
- Implemented Monte Carlo simulations with Euler-Maruyama discretization and antithetic variates for efficient option pricing.
- Modeled arbitrage-free volatility surfaces and optimized performance with NumPy based vectorized computation.

Autonomous Delivery Robot

August – December 2024

Python, Robotics Software, Path Planning, Sensor Integration

- Programmed an autonomous robot in Python capable of navigating maze like environments using A* and Dijkstra's path-planning algorithms. achieved 95% navigation success in test trials.
- Implemented real time obstacle avoidance and a room-sweeping automation mode using feedback from IR sensors.
